Does anyone know how this project was funded and who got the ball rolling on the removal? It is a TU project? Was the state or city of Bethlehem involved, DEP, PF&BC?

I just ask because this is a common concern in PA with all of these low level dams that serve very little purpose anymore and should be removed. I can think of a few on the Bushkill I would like to see be removed. The problem I see is the funding for these projects. They are not high priority as far as a public health or safety issue, they are more of an environmental concern that could involve DEP or PF&BC funding.

Just curious on the background of this project if anyone is in the know.
