If it was parasitic could that be the reason it looks malnourished? It was about 16" and skinny. Typically the trout i catch in the j are fairly fat, and healthy looking. There wasnt anything in the hole as i could see.

Evw659, it was pretty dirty this morning yet, running well but dirty, by tomorrow it should be fairly clear and fish well. I was throwing big steamers, i wasnt about to try and nymph it at that point.
