I agree whole-heartedly with a 7'6" 4wt as the ideal small stream rod, (not real real small streams though).

But I don't agree with the 9' 5wt for all others. A **mediummedium** action 9' WF6 is my go to for everything from windy lakes to the Upper Delaware and medium size streams like Penns and others.

I think you'd find yourself often looking for more casting ability with only a 5wt.

If I only had two rods, it would be a 7'6" DT4F and a 9' WF6F, with an extra spool of WF6Sink Tip.
