Beautiful fish, Odizz.

I've caught a few brookies in Clarks, but all of them have either been obvious stockies or grizzled vets (and after a year or two, I doubt anyone can tell). This confirms my suspicions, I just haven't found any tribbs that I felt would support that size of life. I'll have to finally follow one of those one-or-two foot tribbs a few hundred yards and see if I find anything interesting!

I don't believe I've caught a native brookie on the fly to date. I intend to break that streak before next year is done.
