personally I have to disagree respectfully. IMHO the worse the weather the better. I like the wind to be 10 to 15  
ill still go out if its anything under 25 and yes I am fly fishing. big waves and high wind make fish feed actively. I  
also love the rain and so do fish. like sat night wind was like 10 with some heavy rain the fish were on and active  
right around the storm. last night clear and calm nothing.

I think the fish just get picky. they can see the line and can tell it not what hey usually eat. not saying you cant  
catch fish is just harder. id focus more time in the back then on the beach.

I feel that guys who fear the wind are making mistakes. its the best time to fish and the fish are usually on the  
beach actively feeding. this is why you need a 10, 11 and even 12's.
