The Susq R below Safe Harbor Dam did not disappoint for SMB last night...electrofishing. The population was as good as I had seen it in the period 1985 to the present. There was no indication of a depressed population and the only signs of past problems were about 12-15 bass with healing lesions or fins out of 102 bass collected. Lengths ranged from six to twenty inches. Equally surprising was a 13 inch tiger muskellunge., most likely stocked above Lancaster City in the Conestoga this year or else stocked 20 miles upstream in the Susq R by Bainbridge, Lanc Co.
