There is another thread on this topic. You should search it out, I think there was some good info there. Bottom line, tippet rings make leaders last longer. The tippet ring allows you to tie a new piece of tippet to the ring each time you replace the tippet, you won't eat into the leader each time you tie on a new tippet. They work with both hand tied or knotless leaders. They will float in the surface film so they can be used when fishing dry flies as well as for streamers, and nymphs. I use them on all my leaders now.
