I recently broke my 4wt Orvis Clearwater and called Orvis to pay the fee and send it in to get fixed. They said their having a upgrade deal going on, that if you send in your broke rod, they give a big discount off any rod, and I got the prices 175\$ Access 225\$Superfine and 350\$ Helios2... Well, I can't pass it up and am deff gonna get an upgrade, and my mind is set on a Superfine 1-4wt. I fish alot of streamers up to size 10-12 biggest and am worried that the superfine will not perform well with the bigger flies. I've felt the action of the superfine at the fly shop and it didn't seem that slow, actually leaning toward medium. Any superfine touch guys out there that got any insight on this rods performance with bigger flys would be greatly appreciated before I purchase.. Access and Helios 2 are still an option as well
