Had the LSI, FT+, PT+ and old fish eagle im6. All broke except the pt+ which I returned (wish it would have snapped). The ft might have been my favorite but it was discontinued. The LSI was a close second but did have problems. The lsi is to be better / brittle issues addressed. I am not aware of any l-tech problems. Did you cast one? I didn't but was told its similar to a z-axis in action. Looks nice and reel seat is unusual. Take your reel and make sure it fits. For some reason it sticks in my mind that theres a model that won't hold a lamson reel or something like that.
