I recently received a Medalist 1494 that was made in Akron. It's in pretty good shape, but could use a cleaning and some lube. I also want to re-line it with a WF 5 wt. floating line.

1. What is the best way to clean and lube these reels?
2. What kind of lube do I use and where do I apply it.
3. How much backing should I put on with a WF 5 wt. line?

Any other info you guys think would be helpful would also be appreciated. Thanks for the help!
