Old reels i clean like this. I take old line and backing off. Take reel apart and spray everything with choke cleaner or a good shot gun cleaner spray if reel is metal. Wipe the reel down good and let dry. Next i wipe it again. I only wash the reel this way if there is alot of old greas and dirt in it. If it's clean i wash it in soapy water and let dry. Greas reel a little goe's a long way, some on gears, some on spindle. New line and backing, Put line on first then backing till it's at a safe hight on reel. Then take it off and reverse procedure but using knots backing to reel line to backing.Hope this works.Good luck.
