Now this thread is funny. So where do these 30" fish show up on the PFBC electro-shocking surveys they do all across the state?

Besides, I'll start believing there are 30" fish, when I start to see pics of actual 25" trout. Taped.

Too funny

Yeah. Based on the lengths assigned to some of the fish I've seen in photos on this forum there are quite a few posters whose estimating skills are way off. Maybe I'm just bitter because I'm still trying to hit the 20" mark on a wild trout. 😞
