It's been mentioned already but it's important enough to repeat. You must be dressed correctly or you will not fish in winter for long. I don't mean stepping in the stream looking like the Michelin man either, layer accordingly, really good gloves/socks, and an appropriate hat is a must. If you find yourself hooked on winter fishing go out and get some high quality clothing that enables you to wear less and stay warm. Enjoy, there is something so special about catching trout with a snow cover and or snow falling.

Oh, it's a real good idea to have an extra pair of dry clothing in the vehicle just in case.
