For nymphs I like size 18 pheasant tail soft hackel, Walt's Worm in 14-16, caddis larva 16-18, olive scuds in 14-16, size 18 zebra midge, and sunken olive emerger in 18. I like a CDC olive emerger when the olives are coming off. Having a couple of streamers in various colors may be good too. Use the advice you get here as guidance as to what to put in your box for the trip, but stop into one of the local fly shops and grab some flies based on current conditions. Good luck.
