We live in the east where we dump fish by the buckets into streams and expect civility from the nimrods. Get there when it's cold windy, and some snow won't hurt. The only other people you'll see are nuts like us and people walking dogs.

And if you go to that exact spot now you wont see that nice low dam and riffle anymore because they improved it by removing it and created lots of low featureless water above it and not much of a hole below it.
