OK so I wasn't really feeding them. But after failing to catch a couple fish I was casting to, I crossed upstream from them to start walking back. I must of stirred something up when I did. I had watched these 2 fish just sit still for almost 30 minutes. As soon as I crossed they both went crazy swimming all over the pool, I guess eating what ever I shook loose. I've been told they will do this (by PAFF members) but it was the first time I saw it.

I wish I could end this saying I cast again and caught one, but they were swimming so fast and randomly I couldn't get a fly in front of them. It was still cool to see and a something I might need to try again.

It sounds like they were spooked, not feeding.
