30.5" Brown

Fish was taped at catch site and again at home. Weighed right at 11 lbs on state certified scale.

Spent all freakin night trying to get this posted. I am computer stupid for sure.

Will follow up with a few 29"s from the SC PA streams also.

I and the others that I fish with that hunt big trout tape all fish over 20", so there is no overestimating.

This is a PA fish or just proof that 30" browns exist in the world? Recent catch?
