Great follow-up and nice to see that action was taken on angler feedback. I've fished Black/Hayes on a few occasions in the past and only found brook trout. **This was the stretch from 534 upstream to where the stream splits. I'm assuming that the stream that goes to the left (north) is Hayes as Black Creek goes northeast?**

I could only chuckle at the picture of the angler fishing one of the 'open' areas on Black Creek.

Rhododendron choked, it is a tough stream to navigate and really tests your desire to catch trout and cover water. I always had an uneasy feeling when fishing the creek as I always felt the likelihood of running into a bear was high.

When I'm up there next summer, I may have to take a crack at it again based on the information in the report...

Yes, the stream splits three ways close together. Heading upstream (north) Shanty Run splits to the left (north), Fourth Run splits to the right (east) and Black/Hayes is the middle fork which runs northeast.

Check out the map below and zoom in on the eastern portion of the map to find the stream.
