I have always enjoyed taking photos of many of the different species of fish caught flyfishing over the past few years. Albeit I don't have any good quality photography equipment, all of the photos were taken with my cell phone - so the quality is not real great on some of the photos. I like to crop some of my photos and blow them up a bit to really get a good look at the awesome colors and markings that are present on some of our PA fishes. Here is a gallery of photos with a bit of a more detailed look at some of our common PA cold and warmwater species. A quick photo before the release allows us to go back over time and enjoy them many times over. Hope you enjoy them!
