Am I the only who noticed that the trout pictured on the last page of the report is obv a stocked brown even though they labeled it as "12 wild brown trout".

Why do you think it is a stocked brown? It looks wild to me. The pectoral fin looks perfect.

The brook trout shown in post #16 is a hatchery fish, though. I'm 96.47% sure.

The indicator is the very opaque, milky look of the fins. That is common with hatchery trout. Wild trout fins are generally much more transparent, particularly with small trout.
