Unfortunately we saw no fish in this area so we moved up to the next parking/access area.

You will see fish on occasion in Big Spring, but there are TONS of fish that you can't see. Just because you're not seeing fish doesn't mean they're not in there. The newly renovated section is holding plenty of fish. The weedbeds in the entire stream are holding plenty of fish.

In addition to the fish you cannot see you are looking at fish that you cannot see. Small rainbows covered the bottom of the prior restoration area and it wasn't until I walked and kept looking that I saw the bottom move, It looks barren but its not.
