Wow. Look at the tail on that thing. Well done.

Night stalker makes a good point - I have always been told - dont make your first cast until dark plus 30. Let the fish move out if their day time holes and move into their feeding areas - which may be a deep pool or could be in 12" of water on the gravel.

I'm fascinated by the idea of seeing trout with a torch - I'm guessing it was in a shallow flat or run It would seem that 'no light on the water' is a myth.
