Sal,

There may be a temperature link to the chubs. Earlier this spring I was fishing the Gunpowder (go figure) and they had not adjusted the gates on the dam to allow for bottom release yet. The water was quite warm, i guessing upper 60's. I caught more chubs than trout that day, at a rate of probably 3 to 1. Since then with the colder water I have never seen a chub. Just another piece of the puzzle.

Steve
