From the OP title Re: **Once again** a wild BT population blossoms on a stocked trout stream

Not necessarily looking just at this one stream....looking at the **big picture** in PA. This report is one of many about more and more wild trout being discovered in streams that had little or no wild trout reproduction in just about every region of the State.

Overall cleaner water and cleaner air as well as better management and oversight of the resources is bearing the fruit (the fish)...I believe so.

I would ask every one of us that cares about our streams and rivers in PA to be vigilant, and not let the current administration roll back all the progress that has been made.

Beware of lame ducks and anyone claiming to do things in the name of "jobs." The "job" you actually *get* may be not what you really wanted or expected. 🙄
