I am also looking for input on a new smallmouth rod to use on the Harrisburg area warm water creeks and from my kayak on the Juniata. I was using my 8 wt orvis access but decided to leave it at our place in Florida last week after having a blast with sea trout and red fish on the flats of Sarasota bay. I found it a bit too heavy for the local waters. So... should I pop for a 6 or a 7 wt to throw clousers and small poppers? My wife gave me a nice gift cert for Christmas. May all my decisions be as tough.
