Definitely get the book by Robert Frandsen. Very easy to understand and you can make mixed wings as tough as you want or as easy as you want. I haven't tied as many as the married wings I've tied, but there sure is a different "touch" to them.

Some of my married wings are still quite married after fishing, not like from off the vise, but not as mixed as mixed wings either. That's half the fun for me...fishing them and seeing what they look like afterwards....and after a steelhead grabs one...even better!!
