If you plan on hiking in from the top of the ridge, here are a few pointers. 1) take food, not just snacks, you will need the energy food provides. 2) the hikes are quite steep and one bottle of water won't be enough, 3) the streams on the east side retain the water much better than the streams on the west side and have better access. The west side is a limestone valley. 4) If going in warm weather you won't need waders, but if you plan on fishing during the evening you'll probably want them, the air temps drop quickly as the sun goes down. Once in the park, you'll find the air temps much cooler than the area surrounding the park.

I can give some suggestions on the streams if you like , pm me or just post a response.
