Warmwater Leader Formula

I have been fishing warmwater for years, but typically buy the leaders already built. I would prefer making my own, and am interested in hearing if anyone has a leader formula they like, or can point me in the right direction.

I primarily fish a 7 or 8 wt. for bass and stripers, with the occasional pike getting caught. Depending on the species, I will adjust up to a 9 weight, mainly to throw the larger patterns. The tippet normally goes down to 6lb.

Thanks for any replies,

Tim
