Article is meaningless nonsense. I'll wait to see if anyone else can point out why.

I'm not sure that it is meaningless nonsense, but rather just a reporting of a small data set, of which my age is longer than the data set time period is. And its dangerous to draw long term trends from a decade's worth of data. Please enlighten us who are in the dark, (because of power outages, because of more frequent and violent storms, because of global climate change). 😊
