Doesn't matter whether it was random or whatever, I fish in eastern sullivan county. The area got 10 inches of rain over a several day stretch in 2011 (page 10 below) when streams already had water from a 3+ inch rain a dozen days earlier (page 9 below).

Info on the rainfall totals in E Sullivan makes me less interested in older fishing books, etc, because that much rain could have changed stream structures up there.

<http://www.nws.noaa.gov/om/assessments/pdfs/LeeSusquehanna12.pdf>

And that's the point, these events have long term effects on streams.
