Mine are on the way..... I got brown.

From my discussion with Smiths reps, the ignitor are just their lenses for low light. The previous polar chromatic copper lenses actually would dim slightly in bright sun. These do not and they do not have a low light lense that will do this at the moment. The brown is for normal sunlight days. I am pretty sure that I will purchase the ignitor sooner or later as well.

I like the fact that the polarization is baked into the lense and is not a film like most polarized lenses. They are hydrophobic as well which is great.
