Yep, those two lenses were designed specifically for fishing.

I was a bit surprised not to see a copper tint and/or one or both of those fishing-specific lenses be polarchromic.

The polarchromic ignitor was not designed for fishing specifically, and wasn't announced at the same time either. It was either announced when ChromaPop was initially introduced and I missed it, or it snuck into the lineup quietly at some point.

Whatever the case, I'm interested to see how that lens would work as a fishing lens, as it has virtually the same VLT profile as the the polarchromic copper mirror lens has long been my favorite. I'm just not sure about that rosey colored tint.
