Just my experience but I originally bought the polarchromatic copper lenses and they are great for normal conditions like driving, etc. but I found them lacking for the conditions I trout fish in most and bough a second pair in polarchromatic amber which were much better and I used them for over 80% of my fishing.

Don't know about others but I find myself fishing in the morning, in the evening, on overcast days, and on shady streams the most and the amber let in more light.

Unfortunately, I lost my amber glasses over the winter and am looking at the Low Light Ignitor lenses to replace them with which are different from the regular Ignitor. Where my old amber lenses let in 15 to 30% of visible light, the Low Light Lense is supposed to let in 40% which I see as even more of a good thing.
