Things have really been strange with hatches this year. Last Sunday there was a decent hatch of Grannoms in the late morning then Hendricksons in the early PM. The next few days had nasty rainy weather and no bugs. Yesterday around 2:30 they were on again but not heavy. Today about 10:30 they started but not a lot and there were some spinners flying. My best advice is fish all day and you will see some action if the weather is nice for at least a few more days.
