Welcome Deutschy,

We have many folks here on the PAFF (Paflyfish) community who fish LL regularly. Bet you've met some of 'em.

With respect to writing reports. First off - although the LL is well known - we ask for reports to include Stream, County, Date format in the title line as this helps standardize search function (note the corrections I made).

We appreciate your reports. A good report covers water and weather conditions, hatches, fishing pressure, flies that worked (or didn't), water temps etc. Reports that "caught the skunk" are valuable too - as our reports forum is for more than bragging about a good day (although some bragging rights are fine).

One final suggestion: although we have many LL fans around here...daily reports of the LL are unnecessary. Some new posters on our forums have gone a bit overboard in attempting to write up every fishing trip. Why not contribute a report around once a month or so? Also, reports should focus on specific trips rather than a month's worth of observations, although you can certainly include some long term observations in a daily report.

DaveW
