Hi Mike,

Good to see someone that'll provide a good stream report for the LL.

Some suggestions:

In addition to hatch info, probably the most important info you could provide would be the water temps. Not so important right now, but when it gets really hot outside, that info can be crucial. Anytime the water temp gets over 70 degrees, it's best to leave the fish alone.

Get a good thermometer, take temps in several places with good current flow, and report highs, lows, and time of day the temps were taken.

If you use an infrared thermometer, remember to take readings from a foot or less from the water's surface. For every foot you are away from the surface, you get like 10% error on your reading.

Also, I suggest checking with Dave at the shop to share and coordinate your info. I'm sure he'd appreciate it, and he might be able to add to your report info. He can also forward the report to Gary Blockus of the Morning Call to list in his outdoor column and fishing reports.

Good luck, and thanks for providing information to people that may have to make a long drive, only to find out they should have gone elsewhere.

H.A.
