I LOVE ants. when nothing's biting... an ant is my go to. thin piece of black foam tied on with a turn or 2 of black hackle. easy to tie and catches anything. My local lake has an early season in march and as far as i know they dont stock the stream above and below it. So trying to get some advice to catch a few before the april stocking comes.

I tie the same fly in sizes 18-22... just without the hackle. I don't think it helps. I segment them into three parts.

I've caught trout on the ants in all summer months... i love to fish them behind a cahill or adams.

For the early stockers, wooley buggers should be good. Also try slowly stripping something like a hare's ear with a few turns of partridge around the head.
