Loading up my box for next spring / summer and I'm looking for some tying suggestions for beetles. Tied a bunch this year and none of them turned out very well...even when I use foam, they don't seem to float right, I have a hard time seeing them, etc. So I ended up barely using beetles this summer and from what I hear, I'm really missing out. Believe it or not, I've NEVER caught a trout on a beetle.

So any pattern suggestions would be much appreciated. I've tried a Crowe's beetle without much success, too.

Thanks
