Since I am new to PA and USA fishing, can someone let me know if I need to tie on barb less hooks and if there are other regulations that need to be followed, e.g. is additional weight allowed.

Either I am going to tie a nymph pattern that I use in New Zealand for fishing under willows (which I have been able to get a few 5 lb browies on) or a big deers hair cicada pattern typically used in New Zealand to suspend nymphs and doubles as a great indicator. Else a classic all black gnat.
