Yeah well I was thinking single foot would also save me half the time in putting on the guides and I can see now how it would make things more sensitive. Are they as durable though?

I have access to all the tools I need for the rod building. My uncle used to do it when he was in better shape about 15-20 years ago. He said he would give me everything he has. I know a lot of it is probably out dated equipment but it worked for him so I'm sure I can make it work for me. I had one of his rods he made me until I smashed it in the tailgate of the truck.
