Dear Maurice,

This time last year I saw a log truck come across the bridge at the AT parking lot but today the gate was chained. I did see a loaded truck coming down Rte 325 at about 11:00 AM but I have no idea where it was coming from.

I was walking along stretches of the creek that have some slow moving water and deep pools, but the bottom is mostly sand and some cobbles. You can typically see the bottom clearly in 2 to 3 feet of water, and you should definitely be able to see the golden colored sand. I couldn't have seen a highway flare in the water if it was in there burning. It looked pretty pukey.

Maybe it was a one time thing and they had some equipment crossing the creek somewhere below the dam, but there was a lot of mud in the water that had settled to the bottom. I'll try to get back later in the week to check it out again.

Regards,

Tim Murphy 😊
