First of all, I don't have \$10,000 dollars laying around to pay for killing one of those, nor am I advocating any one do so. Maybe there are some other options for maintaining the fishery. Do I have the answers? I have some ideas but I am not a biologist and I merely stated an observation. Even though I enjoy catching stocked fish I believe ultimately the focus of the fish commission should be restoring habitat and not stocking. Controlling runoff and erosion from agriculture will do more for fish stocks than mashing down the barb on a fly.
