Jack,

Actually metrological spring is March thru May. From Wikipedia:

Meteorological seasons are reckoned by temperature, with summer being the hottest quarter of the year, and winter the coldest quarter of the year.

So, in meteorology for the Northern hemisphere:

- spring begins on March 1,
- summer on June 1,
- autumn on September 1, and
- winter on December 1.

Sorry Jack...I beginning to think and sound like an attorney...I better get a grip!
