Never said you were wrong. I just told my experiences. 😊

although now thinking about it. I have to imagine that the light refraction of a true limstoen spring creek, such as falling springs, is a bit differnt than that of valley creek. Who knows though im just guessing. I will say that on glassy flat weedy water i wouldnt use knotted leaders. The knots can cause drag and collect weeds(as you stated).

Bottomline, do what works for you. That is the best motto in fishing 🏆
