I have as much statistical proof as anyone who disputes my thinking. I'm going on what I have experienced on this stream over a span of 5-6 years.

You claim "statistical proof", yet use one stream over a period of 5 years. Your sample size is insufficient in two ways, and your methods are completely unscientific.

I'd be willing to bet Dave's farm that there are parties with more statistically valid evidence to the contrary, based on the mere lack of validity to yours.

Not trying to be a dick, but that's how I see this argument. I should add that I agree with Jack here.

Like I said in the initial thread, I will respect everyone's opinion on this. Until I see this "valid evidence to the contrary" I'll stand by what I've already said.

Fair enough.
