Also a quick tip on landing fish with a long rod (I frequently use an 11' 4 wt)...

Try and fight the fish so it is upstream of you - when it tires, position it directly upstream of you, lift it to the surface, and let the current carry it down and into your net. It's much easier and more efficient than trying to kneel and reach, or over stress your rod with an extreme backwards angle to get them close enough to net.
