I hope you have been able to get into fish on valley since then.

From my experience on average the larger the nymph the smaller the fish, smaller the fly larger the fish. I hope the pod under the 202 bridge is still sipping midges. You have like 1-2 casts on them before they dive. [/quote]

that's very interesting. that is almost completely opposite of my experience.

when i first started fishing valley,i used small nymphs and beadheads.i caught a lot of small fish.

for years i have been fishing it with bigger flies and catch decent size fish. i have never caught the 18" fish you speak of,but,most i catch are 8-14"

i use flies from 14 up to size eight. i would use larger,but,a size six can damage a trout.
