For fishing in pa , If you could have one rod line weight what would it be? The reason I ask is I am looking for my first quality rod and I am stuck between 3 and 4 wt. Looking for some pros and con for each one

Thanks

Fishrich

A 3 wt. isn't an all around rod for PA or a first rod for a beginner. It sucks in the wind(for a beginner), casting distance for bigger streams is compromised vs. a heavier rod.

Fishrich if you fish a lot of smaller streams start out with a 4 wt. b/c you still can get away with it other places. If you fish a lot of Centre County larger streams I would go with a 5 wt.

Good Luck
