The fish are just looking for something to eat. * of course you could tie a big ball of brown dubbing to a hook shank so it looks like a food pellet. 🍪

Yeah, I actually bought some pellet flies from my fly shop and tried splashing them on the water and the trout didn't look at it, but I have had luck using streamer patterns, wooly buggers and muddler minnows. I guess I can't complain though I haven't gotten skunked yet but I only get one fish each outing...
