If a stream had both wild and stocked fish and you were casting to a rise...you would not know whether that fish was wild or stocked until you had at least 10 seconds of fight done or possibly even when you got it to hand. As many of you admit, sometimes it hard to tell the difference unless you really look at one.

With that in mind, if your only reason for a stream to be overrated is that the fish are stocked, then the only thing overrated are your expectations.
